ABOUT

Senior Python Software Engineer with 8+ years of experience in designing, developing, and automating scalable APIs, microservices, and distributed systems, with a strong focus on Django/Flask solutions, achieving annual savings of US\$100K/year in ordinary processes. Adept at full project lifecycle ownership, from initial requirement definition to deployment, with a proactive problem-solving approach, consistently delivering high-quality, timely solutions.

TECHNICAL SKILLS

TOOLS/MANAGEMENT:	Selenium, TDD, Postman, Jira, Confluence, Jenkins, CI/CD, Celery(PY)/RabbitMQ, SAP Scrapping, Docker, Scrum/Kanban, Slack & add-ons, Trello, Git/GitFlow, Data lakes/warehouse, Power BI
PROGRAMMING LANGUAGES:	Python, JavaScript, TypeScript, Java, C/C++
FRAMEWORKS:	Django, Django REST Framework (DRF), Flask, Node.js, React.js, Vue.js, Angular.js, Spring
DATABASES:	SQL (PostgreSQL, MySQL), MongoDB
CLOUD PLATFORMS:	AWS

PROFESSIONAL EXPERIENCE

Senior Software Engineer at FACC AG - 09/2023 - Currently

- Led the design and development of Python-based backend solutions and RESTful APIs for Aerospace Engineering Standards compliance, defining technical pipelines and acceptance criteria
- Implemented Python automation scripts for integrating with Aerospace Legacy Tools (e.g., CATIA), significantly streamlining Engineering Document Reviews and ensuring compliance
- Managed project development within an Agile framework (Microsoft Suite), collaborating with multi-disciplinary teams to align technical solutions with business objectives
- Reviewed code and mentored junior developers, ensuring that best practices were followed.

Senior Software Engineer at Embraer S/A - 02/2019 - 09/2023

- Mapped opportunities and defined requirements for web application solutions for Non-Quality Management and Aircraft Maintenance/Preservation.
- Managed a team of 4 developers for the implementation of the solutions, using DRF for the back-end (Flask for smaller applications) and React.js for the user client, managing the task development using Agile Tools (Atlassian Suit).
- In charge of back-end development and API tests, defining test scenarios, and ensuring environment integrity using the TDD methodology.
- Introduced and implemented Celery and RabbitMQ to automate asynchronous data pipeline operations, including SAP and MES data scrapping, and developed ETL solutions for data lake applications (PowerBI)
- Evaluated UX/UI page design and flow before its implementation to ensure fluid development and a final seamless experience.

Back-end Software Engineer at STI - 01/2017 - 12/2018

- Developed and maintained robust, scalable Python (Django) APIs for a high-traffic SaaS educational platform, ensuring seamless data integration and high availability for a large user base
- Worked closely with external users and business teams to improve the functionality of public APIs, increase user experience, and reduce the number of reported issues.
- Performed extensive testing and debugging to ensure the stability, security, and performance of the applications in production.
- Contributed to database schema design and optimized SQL queries for API performance.

ACADEMIC EDUCATION

MBA - Project Management, ESALQ-USP, SP/BR - 06/2026

B.Sc, in Science & Technology Engineering, UFRN, RN/BR - 06/2016

LANGUAGES

ENGLISH:	Fluent
PORTUGUESE:	Native
SPANISH:	Intermediate
